

**MONTHLY PROGRESS REPORT #128
FOR NOVEMBER 2007**

EPA REGION I ADMINISTRATIVE ORDERS SDWA 1-97-1019 and 1-2000-0014

**MASSACHUSETTS MILITARY RESERVATION
TRAINING RANGE AND IMPACT AREA**

The following summary of progress is for the period from November 1 to November 30, 2007. Scheduled actions are for the six-week period ending January 11, 2007.

1. SUMMARY OF REMEDIATION ACTIONS

The following is a description of Remediation Actions (RA) underway at Camp Edwards as of November 30, 2007. Remediation actions may include Rapid Response Actions (RRA). An RRA is an interim action that may be conducted prior to risk assessments or remedial investigations to address a known, ongoing threat of contamination to groundwater and/or soil.

Demo Area 1 Comprehensive Groundwater RA

The Demo Area 1 Comprehensive Groundwater RA consists of the removal and treatment of contaminated groundwater to control further migration of explosives and perchlorate. Extraction, treatment, and recharge (ETR) systems at Frank Perkins Road and Pew Road include extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater, and injection wells to return treated water to the aquifer.

The Pew Road ETR continues operation at a flow rate of 103 gallons per minute (gpm). The Pew Road system was shut down on November 3, 2007 for 24 hours due to a storm, and shut down again on November 7, 2007 for 2 hours, due to an electrical power outage. As of November 30, 2007, approximately 163 million gallons of water have been treated and re-injected at the Pew Road ETR System.

The Frank Perkins Road ETR is operating at a flow rate of 808 gpm. An electrical power outage on November 7, 2007 caused the system to shut down for 6 hours. The new southern injection well was completed and tied into the system. As of November 30, 2007, approximately 386 million gallons of water had been treated and re-injected at the Frank Perkins Road ETR System. The RA system has treated 102 million gallons of the 386 million gallon total.

J-1 Range South Groundwater RRA

The J-1 Range South Groundwater RRA consists of removal and treatment of contaminated groundwater to control further migration of explosives. The ETR system includes a single extraction well, ex-situ treatment process to remove explosives from the groundwater, and an infiltration gallery to return treated water to the aquifer.

The ETR unit continues operation at a flow rate of 75 gpm. The system was shut down on November 3, 2007 and November 7, 2007 due to a storm and resulting electrical issues. As of November 30, 2007, approximately 5 million gallons of water have been treated and re-injected at the ETR System.

J-2 Range Groundwater RRA

The J-2 Range Groundwater RRA consists of removal and treatment of contaminated groundwater to control further migration of explosives and perchlorate. ETR systems include

single extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater, and infiltration basins to return treated water to the aquifer.

The mobile ETR units continue operation at a flow rate of 250 gpm and the building ETR continues operation at a flow rate of 125 gpm. The J-2 treatment facility was shut down for 40 hours due to electrical issues from a storm on November 3, 2007. The J-2 modular treatment units were shut down for 18 hours due to electrical issues from the November 3, 2007 storm. As of November 30, 2007, approximately 159 million gallons of water have been treated and re-injected at the mobile ETR System and 79 million gallons of water have been treated and re-injected at the building ETR System.

J-3 Range Groundwater RRA

The J-3 Range Groundwater RRA consists of removal and treatment of contaminated groundwater to control further migration of explosives and perchlorate. ETR systems include single extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater and use of the existing Fuel Spill-12 (FS-12) infiltration gallery to return treated water to the aquifer.

The ETR continues operation at a flow rate of 195 gpm. The system was shut down November 3, 2007 to November 9, 2007 due to electrical issues from a storm. The flow was increased from 175 gpm to 195 gpm when the system was re-started on November 9, 2007. As of November 30, 2007, approximately 130 million gallons of water have been treated and re-injected at the ETR System.

2. SUMMARY OF ACTIONS TAKEN

Drilling progress for the month of November is summarized in Table 1.

Table 1. Drilling progress as of November 30, 2007				
Boring Number	Purpose of Boring/Well	Total Depth (ft bgs)	Depth to Water Table (ft bgs)	Completed Well Screens (ft bgs)
No wells were installed during the month of November.				
ft bgs = ft below ground surface				

Samples collected during the reporting period are summarized in Table 2.

Groundwater samples were collected from recently installed wells at J-1 Range South. Long Term Groundwater Monitoring (LTGM) samples were collected from wells at Central Impact Area (CIA). Groundwater samples were collected in accordance with the Performance Monitoring and Evaluation Plan from J-2 Range. Process water samples were collected from the Frank Perkins Road ETR, the Pew Road ETR, the J-1 Range South ETR, and the J-2 Range ETR. Soil samples were collected at GP-6 and J-2 Range North for the Explosive Detection Dogs (EDD) Pilot Study Post-Survey Investigation. Soil samples were collected from a burial pit in J-2 Range. Surface water samples were collected near a public beach, a private beach, and near the spit at Snake Pond.

The following bullets summarize the BIP items for the month of November. The pre- and post-BIP sample collection dates are shown:

- J-3 Range:

November 14/15, 2007: One (1) 2.36 inch rocket at Grid J3E.

Pre- and post-BIP samples, summarized in Table 2, were collected in accordance with the sampling protocol.

J-2 Range Aerial Assessment continued at J-2 Loc #14 (including perimeter targets). Table 3 shows a grid summary sheet for aerial assessment for the J-2 Range Supplemental Geophysical Anomaly Investigation for the period ending November 30, 2007.

The following are the notes from the November 15, 2007 Technical Team meeting of the Impact Area Groundwater Study Program office at Camp Edwards.

Gun and Mortar

Detection Dog Update – Bill Gallagher

IAGWSP began digging locations identified by the detection dogs at GP-6 using a miniexcavator. Locations 8, 9, and 10 are still in progress.

The Draft EDD Pilot Study Findings Table was handed out. This table provides the EDD location; depth; date; detection type; round size; item description, weight, and quantity; disposition; and general target description at GP-6.

At Location 1, a MEC anomaly of one 5.56 mm cartridge case with propellant was located in the excavation. Also located was munitions debris and assorted RRD.

At Locations 3 and 4 the dogs apparently were keying in on expended artillery primer and artillery primer wrappers. These items were expended with no visible residue; there may be enough on the casings that the dogs keyed on them (smokeless powder could be in the primer). This could indicate how sensitive the dogs can be. The dogs apparently are detecting items that would have very little residual energetics.

One location at J-2 Range was completed. A 7.62 mm tracer round with the tracer material still in it was found at the area identified by the dogs.

All items are being saved. The tracer round will go to the CDC, and photographs will be taken.

Due to safety concerns, hand digs are being done at the J-2 Range Extension Area.

The project note is being followed as written until the work is completed, and the IAGWSP will provide updates as work progresses.

Southeast Ranges

Field Update – Dave Hill

Dave Hill (IAGWSP) noted that due to the storm, power at J-2 was lost from 03 November until 09 November and adjustments have been implemented; at J-1 South power was out for a couple of days; at J-2 North they continued operation; and power loss and communication loss was experienced at J-3.

At J-2 North a sample of MW-330 M2 on Gibbs Road came back as a false positive. The well was resampled and the results were non-detect. Jane Dolan (EPA) requested information from the chemist on the analysis of this sample.

IAGWSP noted that the modeling indicates that around 2010 low level detections will begin to be seen in this area at levels below the State standard of 2 parts per billion.

Darrin Smith (USACE) distributed handouts which included tables and figures that present the findings of the recent data gap fieldwork at the J-1, J-2, and J-3 Ranges. All data gap work was performed in consultation with the regulatory agencies via a series of project notes and meetings. The data gap fieldwork included intrusive investigation of the agreed-to EM-61 QC Grids Targets, Aerial Photo Assessment (APA) locations, and non-intrusive recon areas.

- J-1 Range Data Gap Fieldwork included intrusive investigation of approximately 107 areas based on the December 2006 EM-61 QC Survey of 32 grids. One burial pit (J39-BLP-001) and one burn pit (L1-BNP-001) were uncovered.

Investigation at numerous APA locations and areas of earlier detailed recons uncovered three burial pits and one trash pit. These data are included on the findings table.

- EM-Survey of APA Locations 43, 44, 53, 55, 59, and 63 and the former fenced area; follow-up intrusive investigation at three of those locations (44, 63, and former fenced area).
- EM-Survey of portions of grids M0 and M1 based on earlier non-intrusive recon, and follow-up intrusive investigations of associated areas.
- Intrusive investigations at two APA intrusive investigation-only areas (51 and 58).
- Detailed recon at one APA location (Location 21/Kettle Hole). Only four type B (6"-1') anomalies observed, thus no further action recommended.
- Investigation at three additional areas (Conex Box, Sky 6, J1-30).
- Detailed recon and follow-up intrusive investigation of E and F size anomalies in the area of grids G and H31-43.
- Intrusive investigation at areas of previous non-intrusive recons in grids I8 and I9, K4 and K5, L3 and L4, and M2-M4.

In summary, five burial pits, one burn pit, a trash pit, and a few non-burial related MEC items were uncovered during the investigations. Most of the locations investigated contained only MD and/or RRD.

- J-2 Range Data Gap Fieldwork included intrusive investigation of approximately 70 areas based on January 2007 EM-61 QC Survey of 45 grids. Two burial pits were uncovered (I12-BLP-001 and L19-BLP-001). Fieldwork also included EM-Survey and follow-up intrusive investigations at APA Location 14, where one burial pit (APA14-BLP-001) was uncovered; and intrusive investigation at APA Location 10.

In summary, three burial pits and few non-burial related MEC items were uncovered during the investigations. Most of the locations investigated contained only MD and/or RRD.

- J-3 Range Data Gap Fieldwork included the investigation of the two anomalies and a berm near the Melt-Pour Area and Greenway Road requested by EPA.

In summary, a few non-burial related MEC items were discovered near the areas investigated. Most of the items found were MD and/or RRD.

L Range Status

- The Air Force Research Lab (AFRL) will conduct a pilot test of vegetation clearance at L Range using a remote control brush hog. Work is tentatively scheduled to begin on December 3 or December 10. Mr. Hill will provide a copy of the ROA to EPA.

Pam Richardson (IAGWSP) is preparing the L Range neighborhood notice.

Small Arms Ranges

Juliet Range Soil Results – Paul Nixon

Paul Nixon provided figures for the Juliet Range explosives and metals data; and data tables which include nothing but detects. These two figures are drafts and will change. These tables include calculations of the relative standard deviation (RSD) for replicate samples as an indication of the repeatability of the sample results. The last three charts show the concentrations of 2,4-DNT and nitroglycerin at the firing line and nitroglycerine at the range floor.

Mr. Nixon discussed the level of nitroglycerin at the range floor and feels that the area should be subdivided and resampled.

EPA talked about the timeframe of this investigation and if it meets the requirements of the Mass Guard and suggests meeting with the Mass Guard to assess potential impacts to their construction schedule.

Len Pinaud (MassDEP) felt that it was previously agreed by everyone not to subdivide a decision unit. The concept is first the use of the range is determined, then a conceptual site model is developed, a sampling plan is designed including the size of the grids, samples are collected, and everyone buys into the cleanup based on the decision unit. Mr. Nixon pointed out that the IAGWSP feels that sampling should take an iterative approach when initial results indicate that something could be wrong with the conceptual site model. This is in keeping with EPA's "Triad" approach to site investigations and CRREL recommendations. The results of the resampling with smaller sample areas at the Tango range firing line are an example of successful re-sampling to refine a conceptual site model and better define areas of contamination.

Lynne Jennings (EPA) said that with respect to the subdividing issue with the range floor, EPA would be agreeable with doing one more round of subdividing; however, beyond that EPA believes there are diminishing returns that are not justified by the additional sampling costs. Mr. Nixon reviewed the second figure and the data tables. The data tables provide the detections and the RSD calculation percentage for replicates.

K-Range – Paul Nixon

Mr. Nixon suggests subdividing the larger range area, and not collecting replicates to the same extent as J-Range. EPA would like to further discuss the appropriate number of replicate samples with CRREL. Also, perchlorate has not been detected at J-Range and IAGWSP recommends that this analyte be dropped for K-Range.

IART Meeting for November 2007

There was no meeting of the Impact Area Groundwater Review Team (IART) for the month of November 2007. The next IART meeting is scheduled for December 4, 2007.

3. SUMMARY OF DATA RECEIVED

Table 4 (sorted by analyte) summarizes the detections, since 1997, that equaled or exceeded an EPA Maximum Contaminant Level (MCL), MassDEP MCL (MMCL) or Health Advisory (HA) for drinking water. Table 4 is updated on a monthly basis; discussions in the text are updated on the same schedule as Figures 1 through 8, which are discussed later in this section.

Table 5 summarizes first-time validated detections of explosives and perchlorate below the MCL/MMCL/HA for drinking water received from November 1, 2007 through November 30, 2007. First-time validated detections of VOCs, SVOCs, herbicides and pesticides are included and discussed quarterly in the March, June, September, and December Monthly Progress Reports. Metals, chloroform, and bis (2-ethylhexyl) phthalate (BEHP) are excluded from Table 5 for the following reasons: metals are a natural component of groundwater, particularly at levels below MCLs or HAs; detections of chloroform are pervasive throughout Cape Cod and are not likely the result of military training activities; and BEHP is believed to be largely an artifact of the investigation methods and introduced to the samples during collection or analysis.

Figures 1 through 8 depict the cumulative results of groundwater analyses for the period from the start of the Impact Area Groundwater Study (July 1997) to the present. Each figure depicts results for a different analyte class:

- Figure 1 shows the results of explosive analyses by EPA Method 8330. This figure is updated and included each month.
- Figure 2 shows the results of inorganic analyses (collectively referred to as “metals”, though some analytes are not true metals) by methods E200.8, 300.0, 350.2M, 353M, 365.2, CYAN, IM40MB, IM40MBM, and IM40HG. This figure is updated and included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 3 shows the results of Volatile Organic Compound (VOC) analyses by methods OC21V, OC21VM, 504, 8021W, and SW8260 exclusive of chloroform detections. This figure is updated and included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 4 shows the chloroform results using the Volatile Organic Compound (VOC) analyses by method OC21V and OC21VM. This figure is updated and included semi-annually in the June and December Monthly Progress Reports.
- Figure 5 shows the results of Semi-Volatile Organic Compound (SVOC) analyses by methods OC21B and SW8270, exclusive of detections of BEHP. This figure is updated and included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 6 shows the BEHP results using the Semi-Volatile Organic Compound (SVOC) analyses by methods OC21B and SW8270. This figure is updated and included semi-annually in the June and December Monthly Progress Reports.
- Figure 7 shows the results of Pesticide (method OL21P) and Herbicide (method 8151) analyses. This figure is updated and included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 8 shows the results of Perchlorate analysis by method E314.0. This figure is updated and included each month.

The concentrations from these analyses are depicted in Figures 1 through 7 compared to Maximum Contaminant Levels (MCLs) or Health Advisories (HAs) published by EPA for drinking water. For Figures 1 through 7, a red circle is used to depict a well where the concentration of one or more analytes was greater than or equal to the lowest MCL or HA for the analyte(s). A yellow circle is used to depict a well where the concentration of all analytes was less than the lowest MCL or HA. A green circle is used to depict a well where the given analytes were not detected in groundwater samples. For Figure 8, a red circle is used to depict a well where the concentration of perchlorate was greater than or equal to 24 ppb (EPA's Drinking Water Equivalent Level (DWEL) derived from the 2005 National Academy of Science (NAS) report). An orange circle is used to depict a well where the concentration of perchlorate is above 2 ppb (the Massachusetts MCL (MMCL)) and below 24 ppb. A yellow circle is used to depict a well where the concentration of perchlorate was less than 2 ppb. A green circle is used to depict a well where perchlorate was not detected in groundwater samples. For all figures, an open circle is used to depict a proposed well where the analytes in question for example, Explosives in Figure 1, have not yet been quantified. A black circle represents a well that has been sampled for analytes, but validated groundwater data is not yet available.

There are multiple labels listed for some wells in Figures 1 through 8, which indicate multiple well screens at different depths throughout the aquifer. The aquifer is approximately 200 to 300 feet thick in the study area. Well screens are positioned throughout this thickness based on various factors, including the results of groundwater profile samples, the geology, and projected locations of contaminants estimated by groundwater modeling. The screen labels are colored to indicate which of the depths had the chemical detected above drinking water standards. Generally, groundwater entering the top of the aquifer will move deeper into the aquifer as it moves radially outward from the top of the water table mound. Light blue dashed lines in Figures 1 through 8 depict water table contours. Groundwater generally moves perpendicular to these contours, starting at the center of the 70-foot contour (the top of the mound) and moving radially outward. The rate of vertical groundwater flow deeper into the aquifer slows as groundwater moves away from the mound.

The results presented in Figures 1 through 8 are cumulative, which provides a historical perspective on the data rather than a depiction of current conditions. Any detection at a well that equals or exceeds the MCL/DWEL/HA results in the well having a red symbol, regardless of later detections at lower concentrations, or later non-detects. The difference between historical and current conditions varies according to the type of analytes. There are little or no differences between historical and current exceedances of drinking water criteria for Explosives, Perchlorate, VOCs, Pesticides, and Herbicides; the minor differences are mentioned in the following paragraphs. There are significant differences between historical and current exceedances of drinking water criteria for Metals and SVOCs, as described further below.

Figure 1: Explosives in Groundwater Compared to MCLs/HAs

For data validated in November 2007, no wells had first-time validated detections of explosives above the MCL/HAs. One well, 90MW0022, had a first-time validated detection of HMX below the MCL/HA of 400 ppb.

Exceedances of drinking water criteria for explosive compounds are indicated in seven general areas:

- Demo Area 1 (wells 19, 31, 34, 73, 76, 77, 114, 129, 139, 165, 210, and 211);
- Demo Area 2 (wells 16, 160, 259, 262, and 404);
- Former A Range (well 206);
- The Impact Area and CS-19 (wells 58MW0001, 58MW0002, 58MW0009E, 58MW0011D, 58MW0016B, 58MW0016C, 58MW0018B; and wells 1, 2, 23, 25, 37, 38, 40, 43, 85, 86, 87, 88, 89, 90, 91, 93, 95, 98, 99, 100, 101, 102, 105, 107, 111, 112, 113, 176, 178, 184, 201, 203, 204, 207, 209, 212, 223, 235, OW-1, OW-2, and OW-6);
- J Ranges and southeast of the J Ranges (wells 45, 58, 130, 132, 147, 153, 163, 164, 166, 171, 191, 193, 196, 198, 215, 218, 227, 232, 234, 247, 265, 289, 303, 306, 324, 326, 343, 360, 368, 369, 398, 477, 481, 485, 486, 487, and wells 90MW0022, 90MW0041, 90MW0054 and 90WT0013);
- Landfill Area 1 (wells 27MW0018A, 27MW0020A, and 27MW0020B); and
- Northwest Corner of Base Boundary (well 323).

Exceedances of drinking water criteria were measured for TNT at Demo Area 1 (wells 19S, 31S, 31M, and 31D) and Southeast of the Ranges (196S). Exceedances of the HA for RDX were noted at all of the locations listed above except at MW-45 and the LF-1 wells. Exceedances of drinking water criteria were measured for 2,6-dinitrotoluene (2,6-DNT) at MW-45S. Exceedances of drinking water criteria were measured for 1,3-dinitrobenzene at LF-1 wells 27MW0018A, 27MW0020A and 27MW0020B.

Demo Area 1 has a single well-defined source area and extent of contamination. The estimated extent of RDX exceeding the HA at Demo Area 1 based on the most recent groundwater measurements is indicated by a magenta concentration contour line on Figure 1 and Inset A.

Demo Area 2 has five groundwater exceedances of the RDX HA at MW-16S, MW-160S, MW-259, MW-262M1, and MW-404M2. The extent of the contamination is currently under investigation.

The Former A Range has exceedances of the RDX HA at MW-206M1. The S screen in this location is non-detect for all explosives.

The Impact Area has a plume defined by RDX concentrations above the HA of 2 ppb. The plume originates primarily along Turpentine Road and extends downgradient to the west-northwest. Another source of RDX in the Impact Area is CS-19. Portions of CS-19 are currently under investigation by the Air Force Center for Environmental Excellence (AFCEE) under the Superfund program. The extent of RDX has largely been defined in the Impact Area and the investigation phase of the project is nearing completion.

The J Ranges and downgradient areas have five groundwater plumes defined by concentrations of RDX above the HA of 2 ppb. The five plumes originate at the J-1 Range Interberm Area (northern plume in the vicinity of MW-58 and MW-265), the J-2 Range North plume (northern plume extending from MW-130), the J-2 Range East plume (eastern plume including MW-215), the J-3 Range Demolition Area (southern plume extending from MW-163 south to Snake Pond) and the L Range (in an area defined by MW-147 and MW-153 at Greenway Road). In addition, RDX detections at MW-398M2 suggest a possible plume at the south end of the J-1 Range. All the J ranges and the L Range are currently under investigation and the plumes will be updated and refined as new validated data is received.

The Northwest Corner of the base boundary has one validated detection of RDX in groundwater above the HA of 2 ppb at MW-323M2. The M1 screen in this location has a validated detection of RDX in groundwater below 2 ppb.

Figure 2: Metals in Groundwater Compared to MCLs/HAs

Exceedances of drinking water criteria for metals are scattered throughout the study area. Where two or more rounds of sampling data are available, the exceedances generally have not been replicated in consecutive sampling rounds. The exceedances have been measured for antimony, arsenic, cadmium, chromium, lead, molybdenum, sodium, thallium and zinc. Exceedances of the arsenic drinking water criteria were repeated at three (wells 58MW0010A, MW-7M1 and MW-45S) of the six locations with arsenic exceedances. At the remaining three locations (wells MW-3D, MW-52M2 and MW-152M1), arsenic exceedances were not repeated in subsequent results. Cadmium (well MW-52M3) and chromium (well MW-7M1) were each detected above drinking water criteria in a single sampling round in August-September 1999. Exceedances of the drinking water criteria for lead were repeated at two of four locations (wells ASP and MW-45S). At the remaining two locations (wells MW-2S and MW-7M1) lead exceedances were not repeated in subsequent results. Exceedances of the drinking water criteria for molybdenum were repeated at two of eight locations (wells MW-53M1 and MW-54S) with molybdenum exceedances. All of the molybdenum exceedances were observed in year 1998 and 1999 results. Exceedances of the drinking water criteria for sodium were repeated at 12 of the 21 locations with sodium exceedances (wells MW-2S, MW-21S, MW-46S, MW-57M3, MW-57M2, MW-57M1, MW-144S, MW-145S, MW-148S, MW-187D, ASP and SDW261160). Seven wells (MW-21S, MW-57M1, MW-57M3, MW-187D, BHW215083B, BHW215083D and ASP) had sodium exceedances in year 2004, 2005, and/or 2006 results. Zinc exceeded the HA in seven wells, all of which are constructed of galvanized (zinc-coated) steel.

There have been few exceedances of drinking water limits for antimony and thallium since the introduction of the ICP/GFAA and ICP/MS methods, discussed in the next paragraph. None of the 13 locations with antimony exceedances had repeated exceedances and only two exceedance (wells MW-38M2 and MW-73S) were measured since January 2003. Twelve of the 71 locations with thallium exceedances had repeated exceedances in subsequent sampling rounds (wells MW-7M1, MW-7M2, MW-19S, MW-45S, MW-47M2, MW-47M3, MW-52S, MW-52D, MW-54S, MW-54M1, MW-58S and MW-94M2). There have been no exceedances of thallium since January 2003.

Groundwater samples sent for metals analysis are analyzed for most metals by Inductively Coupled Plasma (ICP) in accordance with U.S. EPA Contract Laboratory Program Statement of Work ILM04.0. In May of 2001, the IAGWSP began analyzing for antimony and thallium using the GFAA (graphite furnace atomic adsorption) method in accordance with EPA Drinking Water Methods 204.2 (antimony) and 279.2 (thallium) in order to achieve lower detection limits for these metals. Both the ILM04.0 and GFAA methods are subject to false positive results at trace levels due to interferences. As a result, the IAGWSP changed to a new method to achieve lower detection limits for antimony and thallium in January of 2003. Groundwater samples are now analyzed for antimony and thallium by Inductively Coupled Plasma/Mass Spectroscopy (ICP/MS) in accordance with the EPA Method 6020. The ICP/MS Method 6020 has greater sensitivity and the added feature of selectivity for antimony and thallium. These additional methods achieve lower detection limits for these two metals and reduce the number of false positive results.

The distribution and lack of repeatability of the metals exceedances is not consistent with a contaminant source, nor do the detections appear to be correlated with the presence of explosives or other organic compounds. The IAGWSP evaluated inorganic background concentrations using the groundwater quality database of 1999, and submitted a draft report describing background groundwater quality in December 1999.

Figure 3: VOCs in Groundwater Compared to MCLs/HAs

Exceedances of drinking water criteria for VOCs are indicated in six general areas: Northeast Corner (well LRMW003), Impact Area boundary (MW-28S), CS-10 (wells 03MW0007A, 03MW0014A, and 03MW0020), LF-1 (well 27MW0017B), FS-12 (wells MW-45S, 90MW0003, and ECMWSNP02D), and in the J-1 Range (well MW-187D). CS-10, LF-1, and FS-12 are sites located near the southern extent of the Training Ranges that are currently under investigation by AFCEE under the Superfund program. Exceedances of drinking water criteria were measured for tetrachloroethylene (PCE) at CS-10, for vinyl chloride at LF-1, and for methylene chloride, toluene, 1,2-dichloroethane, and ethylene dibromide (EDB) at FS-12. These compounds are believed to be associated with the sites under investigation by AFCEE. Detections of benzene, tert-butyl methyl ether, and chloromethane at J-1 Range well MW-187D, chloromethane at Northeast Corner well LRMW003, and 1,2-dibromo-3-chloropropane at Impact Area boundary well MW-28S are currently under investigation.

Figure 4: Chloroform in Groundwater Compared to MCLs

Chloroform has been widely detected in groundwater across the Upper Cape as stated in a joint press release from USEPA, MassDEP, IRP, and the Joint Programs Office. The Cape Cod Commission (2001) in their review of public water supply wells for 1999 found greater than 75% contained chloroform with an average concentration of 4.7 ug/L. The IRP has concluded chloroform is not the result of Air Force activities. A detailed discussion of the presence of chloroform is provided in the Final Central Impact Area Groundwater Report (06/01). To date, the source of the chloroform in the Upper Cape groundwater has not been identified.

Figure 5: SVOCs in Groundwater Compared to MCLs/HAs

Exceedances of drinking water criteria for SVOCs are scattered throughout the study area. All exceedances of drinking water criteria for SVOCs were measured for bis (2-ethylhexyl) phthalate (BEHP), with the exception of two wells. MW-264M1 (J-3 Range) had a detection of benzo(a)pyrene at concentrations of more than twice the HA and MW-241M1 (L Range) had detections of naphthalene above the HA of 100 ppb. Detections of BEHP are presented separately in Figure 6 and discussed in the next paragraph.

Figure 6: BEHP in Groundwater Compared to MCLs

Exceedances of drinking water criteria for bis (2-ethylhexyl) phthalate (BEHP) are scattered throughout the study area. BEHP is believed to be largely an artifact of the investigation methods, introduced to the samples during collection or analysis. However, the potential that some of the detections of BEHP are the result of activities conducted at MMR has not been ruled out.

A detailed discussion of the presence of BEHP is provided in the Draft Completion of Work Report (7/98) and subsequent responses to comments. The theory that BEHP mostly occurs as an artifact, and is not really present in the aquifer, is supported by the results of subsequent

sampling rounds that show much lower levels of the chemical after additional precautions were taken to prevent cross-contamination during sample collection and analysis. Only four locations (out of 93) showed BEHP exceedances in consecutive sampling rounds: 28MW0106 (located near SD-5, a site under investigation by AFCEE), 58MW0006E (located at CS-19), 90WT0013 (located at FS-12), and MW-146M1 (located at L Range). Subsequent sampling rounds at all these locations have had results below the MCL. Eleven wells (27MW0705, 27MW2061, C2-B, C6-C, C7-B, MW-47M2, MW-164M1, MW-168M1, MW-188M1, MW-196M1, and MW-198M1) had BEHP exceedances in the year 2002 and 2003 results. There have been no exceedances of BEHP in 2004, one exceedance of BEHP, at MW-356M1 (J-3 Range), in 2005, and one exceedance of BEHP, at MW-477M2 (J-1 Range), in 2007.

Figure 7: Herbicides and Pesticides in Groundwater Compared to MCLs/HAs

There has been one exceedance of drinking water criteria for pesticides, at well PPAWSMW-1. A contractor to the United States Air Force installed this monitoring well at the PAVE PAWS radar station in accordance with the Massachusetts Contingency Plan (MCP), in order to evaluate contamination from a fuel spill. The exceedance was for the pesticide dieldrin in a sample collected in June 1999. This well was sampled again in November 1999. The results of the November sample indicate no detectable pesticides although hydrocarbon interference was noted. It appears from the November sample that pesticides identified in the June sample were false positives. However, the June sample results cannot be changed when following the EPA functional guidelines for data validation. The text of the validation report for the June sample has been revised to include an explanation of the hydrocarbon interference and the potential for false positives.

There has been one exceedance of drinking water criteria for herbicides, at well MW-41M1 (Impact Area). This response well was installed downgradient of the Impact Area. The exceedance was for the herbicide pentachlorophenol in a sample collected in May 2000. There were no detections above the MCL of this compound in the three previous sampling rounds in 1999, nor in the subsequent sampling rounds in 2000, 2001, 2002, and 2003.

Figure 8: Perchlorate in Groundwater Compared to a 2 ppb Concentration

For data validated in November 2007, three wells, MW-209M2, MW-87M1, and MW-88M2, had first-time validated detections of perchlorate above the MMCL of 2 ppb. Two wells, MW-23M1 and MW-330M2, had a first-time validated detection of perchlorate below the MMCL of 2 ppb.

Sampling and analysis of groundwater for perchlorate was initiated at the end of the year 2000 as part of the IAGWSP. Cumulative exceedances of the 2 ppb concentration of perchlorate are indicated in seven general areas:

- Demo Area 1 (wells 19, 31, 32, 33, 34, 35, 36, 73, 75, 76, 77, 78, 114, 129, 139, 162, 165, 172, 210, 211, 225, 255, 258 and 341);
- Impact Area and CS-19 (wells 58MW0009C, 58MW0015; and wells 38, 87, 88, 89, 91, 93, 101, 209, and OW-1);
- J Ranges and southeast of the J Ranges (wells 93, 125, 127, 128, 130, 132, 142, 143, 158, 163, 166, 193, 197, 198, 215, 232, 234, 237, 243, 247, 250, 263, 265, 286, 289, 293, 295, 300, 302, 303, 305, 307, 310, 313, 319, 321, 324, 326, 329, 335, 339, 343, 346, 348, 366, 368, 370, 393, and wells 90PZ0211, 90MW0022 and 90MW0054, 90WT0013, J2EW3-MW-2-B, and RS003P);
- Landfill Area 1 (27MW0031B);

- CS-18 (well 16MW0001);
- Northwest Corner of Base Boundary (wells 4036009DC, 66, 270, 277, 278, 279, 283, 284, 287, 297, 301, 309, 323, and RSN0W3); and
- Western Boundary (wells 80, 233, and 267).

Demo Area 1 has a single well-defined source area and extent of contamination. The downgradient extent of the perchlorate plume has been determined with the installation of monitoring wells along the power line right-of-way east of Fredrickson Road.

The Impact Area has eight locations with exceedances of the 2 ppb concentration of perchlorate. The perchlorate plume extends from near the center of the Impact Area to the northwest, in the vicinity of Burgoyne Road.

Plumes have been identified in four areas in the J Ranges. The J-1 Interberm perchlorate plume has several perchlorate detections in downgradient locations MW-265, MW-286, MW-303, MW-326, MW-346, and MW-370. The J-3 Range Demolition perchlorate plume has detections in several wells immediately downgradient of the source area, which is centered at MW-198, and further downgradient centered near location 90MW0054. The J-2 Range North perchlorate plume has detections at source area locations MW-130 and MW-263, and downgradient locations MW-289, MW-293, MW-300, MW-302, MW-305, and MW-313. The J-2 East perchlorate plumes are in the process of delineation and include detections at MW-307, MW-310 and MW-368. There is a single perchlorate detection (well 90WT0013) at the L Range which exceeds the 2 ppb concentration.

The Northwest Corner has a perchlorate plume extending from Canal View Road at the base boundary to the Cape Cod Canal. This area is under investigation and the plume will be updated and refined as new data is received.

The LF-1 and CS-18 areas are under investigation by AFCEE in the Superfund Program.

The Western Boundary has three locations (wells 80, 233, and 267), which exceed the 2 ppb perchlorate MMCL.

4. DELIVERABLES SUBMITTED

Deliverables submitted during the reporting period include the following:

Response to Comments Letter on the Draft Remedial Investigation Work Plan for the Gun and Mortar Firing Positions at the Massachusetts Military Reservation, Cape Cod	11/02/2007
Monthly Progress Report No. 127 for October 2007	11/09/2007

5. SCHEDULED ACTIONS

Figure 9 provides a Gantt chart updated as of January 7, 2007, to reflect progress and proposed work. The January 2007 Revised Combined Schedule (RCS), included in this monthly report, is currently under review by the IAGWSP, EPA, and MassDEP. A revised and "up-to-date" RCS

will be published in the following monthly report. The following documents are scheduled to be submitted in December and early January:

- J-1 Range South Soil/Groundwater Final Remedial Investigation/Feasibility Study Report
- J-1 Range North Soil/Groundwater Final Remedial Investigation/Feasibility Study Report
- J-1 Range North Soil/Groundwater Draft Remedy Selection Plan
- Northwest Corner Soil/Groundwater Final Remedial Investigation/Feasibility Study Report
- Demolition Area 2 Soil/Groundwater Final Investigation Report
- Small Arms Range Soil/Groundwater Draft Investigation Report
- Ammunition Supply Point Soil/Groundwater Final No Further Action Decision Document

The following documents are being prepared or revised during December and early January:

- J-1 Range South Groundwater Draft Rapid Response Action Completion of Work Report
- J-1 Range South Soil/Groundwater Draft Remedy Selection Plan
- J-1 Range South Soil/Groundwater Draft Performance Monitoring Plan
- J-2 Range Soil Final Investigation Report
- J-3 Range Soil Final Investigation Addendum
- J-3 Range Groundwater Draft Interim Remedial Action & Close-Out Report
- L Range Soil/Groundwater Final Remedial Investigation/Feasibility Study Report
- Central Impact Area Soil/Groundwater Draft Feasibility Study
- Northwest Corner Soil/Groundwater Draft Remedy Selection Plan
- Western Boundary Soil/Groundwater Final Decision Document
- Demolition Area 2 Soil/Groundwater Draft Remedy Selection Plan
- Gun & Mortar Range Soil/Groundwater Draft Investigation Report
- Former K Range Soil/Groundwater Final Remedial Investigation Report
- Wide Area Source Assessment Soil/Groundwater Draft Investigation Report

Table 3
J-2 Range Aerial Assessment Target Summary Table (WE 02 Nov 07)

Grid/ Location	Date Updated	Number of Excavations	Items	MEC CDC	MEC BIP	MD (lbs)	RRD (lbs)
J2 Loc #10	9/21/2007	1	Various MD fragments			5	
			Assorted RRD				2
J2 Loc #14 (incl perimeter targets)	11/2/2007	1	20mm Projectiles (unknown filler, presumed live fuze)	12			
			30mm Projectiles (unknown filler, presumed live fuze)	4			
			Pin Flares (presumed pyrotechnic)	15			
			Fuze Parts w/ dets, M51 (presumed live)	56			
			Fuze w/ dets, M51 (presumed live)	3			
			M57 PD Fuze (presumed live)	1			
			Unknown Fuze Parts w/dets (presumed live)	7			
			Unknown Rocket Motor (presumed propellant)	1			
			40mm Fragmentation Ball (unknown filler)	5			
			35mm SubCal LAW Rocket (unknown filler, presumed live fuze)	1			
			40mm Grenades (unknown filler)	2			
			105mm Cartridge Case with Propellant Grains (presumed M1 propellant)-	1			
			Various MD fragments			2047	
			Assorted RRD				8153
Total		2		108	0	2052	8155

MEC = Munitions and Explosives of Concern
 CDC = Controlled Detonation Chamber
 BIP = Blown in Place
 MD = Munitions Debris
 RRD = Range Related Debris
