

**MONTHLY PROGRESS REPORT #285
FOR DECEMBER 2020**

EPA REGION I ADMINISTRATIVE ORDERS SDWA 1-97-1019 and 1-2000-0014

**JOINT BASE CAPE COD (JBCC)
TRAINING RANGE AND IMPACT AREA**

The following summary of progress is for the period from 1 December to 31 December 2020.

1. SUMMARY OF REMEDIATION ACTIONS

Remediation Actions (RA) Underway at Camp Edwards as of 1 January 2021:

Demolition Area 1 Comprehensive Groundwater RA

The Demolition Area 1 Comprehensive Groundwater RA consists of the removal and treatment of contaminated groundwater to control further migration of explosives compounds and perchlorate. Extraction, treatment, and recharge (ETR) systems at Frank Perkins Road, Pew Road, Base Boundary, and the Leading Edge include extraction wells, ex-situ treatment processes to remove explosives compounds and perchlorate from the groundwater, and injection wells to return treated water to the aquifer.

The Frank Perkins Road Treatment Facility has been optimized as part of the Environmental and System Performance Monitoring (ESPM) program at Demolition Area 1. The treatment facility continues to operate at a flow rate of 175 gpm, with over 2.791 billion gallons of water treated and re-injected as of 1 January 2021. The following Frank Perkins Road Treatment Facility shutdowns occurred in December.

- 0800 on 07 December 2020 due to a scheduled JBCC power outage and was restarted at 1410 on 07 December 2020.

The Pew Road Mobile Treatment Unit (MTU) continues to operate at a flow rate of 65 GPM. As of 1 January 2021, over 666.8 million gallons of water was treated and re-injected. The following Pew Road MTU shutdowns occurred in December.

- 1345 on 17 November 2020 due to plumbing and electrical system vandalism and was restarted at 1015 on 01 December 2020.
- 0800 on 07 December 2020 due to a scheduled JBCC power outage and was restarted at 1230 on 07 December 2020.

The Base Boundary MTU continues to operate at a flow rate of 65 gpm. As of 1 January 2021, over 285.4 million gallons of water was treated and re-injected. No Base Boundary MTU shutdowns occurred in December.

The Leading Edge system continues to operate at a flow rate of 100 gpm. As of 1 January 2021, over 230.1 million gallons of water was treated and re-injected. The following Leading Edge system shutdowns occurred in December.

- 1454 on 05 December 2020 due to a power outage and was restarted at 0810 on 07 December 2020.
- 1904 on 27 December 2020 due to a “VFD fault” alarm and was restarted at 1041 on 28 December 2020.

J-2 Range Groundwater RA

Northern Plant

The J-2 Range Northern Treatment facility consists of removal and treatment of contaminated groundwater to control further migration of explosives compounds and perchlorate. The Extraction, Treatment, and Re-infiltration system includes three extraction wells, ex-situ treatment process to remove explosives compounds and perchlorate from the groundwater, and an infiltration basin to return treated water to the aquifer.

The Northern Treatment Building G continues to operate at a flow rate of 225 gpm. As of 1 January 2021, over 1.318 billion gallons of water have been treated and re-injected. The following Northern Treatment Building G shutdowns occurred in December.

- 0503 on 01 December 2020 due to power supply interruption and was restarted at 0819 on 01 December 2020.

The Northern MTUs E and F continue to operate at a flow rate of 250 gpm. As of 1 January 2021, over 1.777 billion gallons of water have been treated and re-injected. The following Northern MTU E shutdowns occurred in December.

- 0601 on 01 December 2020 due to power supply interruption and was restarted at 0804 h on 01 December 2020.
- 2037 on 25 December 2020 due to a “VFD fault” alarm and was restarted at 0800 on 28 December 2020.

Eastern Plant

The J-2 Range Eastern Treatment facility consists of removal and treatment of groundwater to minimize downgradient migration of explosives compounds and perchlorate. The ETI system includes the following components: three extraction wells in an axial array, an ex-situ treatment process consisting of an ion exchange (IX) resin and granular activated carbon (GAC) media to treat perchlorate and explosives compounds, and three infiltration trenches located along the lateral boundaries of the plume where treated water will enter the vadose zone and infiltrate into the aquifer. The J-2 Range Eastern system is running at a combined total flow rate of 495 gpm.

The MTUs H and I continue to operate at a flow rate of 250 gpm. As of 1 January 2021, over 1.431 billion gallons of water have been treated and re-injected. No MTU H and I shutdowns occurred in December.

MTU J continues to operate at a flow rate of 120 gpm. As of 1 January 2021, over 660.4 million gallons of water have been treated and re-injected. No MTU J shutdowns occurred in December.

MTU K continues to operate at a flow rate of 125 gpm. As of 1 January 2021, over 781.2 million gallons of water have been treated and re-injected. No MTU K shutdowns occurred in December.

J-3 Range Groundwater RA

The J-3 Range Groundwater RA consists of removal and treatment of contaminated groundwater to control further migration of explosives compounds and perchlorate. The ETR system includes four extraction wells, ex-situ treatment process to remove explosives compounds and perchlorate from the groundwater, and use of the existing Fuel Spill-12 (FS-12) infiltration gallery to return treated water to the aquifer.

The J-3 system is currently operating at 255 gpm. As of 1 January 2021, over 1.437 billion gallons of water have been treated and re-injected. No J-3 Range system shutdowns occurred in December:

J-1 Range Groundwater RA

Southern Plant

The J-1 Range Southern Groundwater RA consists of removal and treatment of contaminated groundwater to control further migration of explosives compounds. The ETR system includes two extraction wells, ex-situ treatment process to remove explosives compounds from the groundwater, and an infiltration trench to return treated water to the aquifer.

The Southern MTU continues to operate at a flow rate of 125 gpm. As of 1 January 2021, over 638.8 million gallons of water have been treated and re-injected. The following J-1 Range Southern system shutdowns occurred in December.

- 0147 on 29 December 2020 due to replacement of the MTU ball valve and hose and restarted at 0900 on 30 December 2020.

Northern Plant

The J-1 Range Northern Groundwater RA consists of removal and treatment of contaminated groundwater to control further migration of explosives compounds and perchlorate. The ETR system includes two extraction wells, ex-situ treatment process to remove explosives compounds and perchlorate from the groundwater, and an infiltration trench to return treated water to the aquifer.

The Northern MTU continues to operate at a total system flow rate of 250 gpm. As of 1 January 2021, over 917.5 million gallons of water have been treated and re-injected. The following J-1 Range Northern MTU shutdowns occurred in December.

- 0411 on 01 December 2020 due to power supply interruption and was restarted at 0736 on 01 December 2020.

Central Impact Area RA

The Central Impact Area (CIA) Groundwater treatment facility consists of removal and treatment of groundwater to minimize downgradient migration of explosives compounds and perchlorate. The ETR system includes the following components: three extraction wells, an ex-situ treatment process consisting of an ion exchange (IX) resin and granular activated carbon (GAC) media to treat explosives compounds, and three infiltration galleries to return treated water to the aquifer. The CIA systems 1, 2, and 3 continue to run at a combined total flow rate of 750 gpm. As of 1

January 2021, over 2.314 billion gallons of water have been treated and re-injected. The following CIA system shutdowns occurred in December.

- CIA1 MTU at 0800 on 07 December 2020 due to a scheduled JBCC power outage and was restarted at 1310 on 07 December 2020.
- CIA2 MTU at 0800 on 07 December 2020 due to a scheduled JBCC power outage and was restarted at 1325 on 07 December 2020.

2. SUMMARY OF ACTIONS TAKEN

Operable Unit (OU) Activity as of 1 January 2021

CIA

- Perform intrusive investigations
- Perform routine check of the BEM cover
- Perform routine MD processing
- Demobilize for holidays (remobilize early Jan 2021)

Demolition Area 1

- Demo 1 SPM program groundwater sampling
- Exchanged Pew Road MTU system bag filters on 18 December 2020.

Demolition Area 2

- Demo 2 LTM program groundwater sampling

J-1 Range

- J1 North SPM program groundwater sampling and hydraulic monitoring

J-2 Range

- No activity

J-3 Range

- No activity

L Range

- No activity

Small Arms Ranges

- No activity

Training Areas

- Intrusive investigation in Former E Range geophysical investigation grids
- Demobilize for winter (remobilize early March 2021)

Other

- Collected process water samples from the Central Impact Area (Systems 1 ,2, and 3), Demolition Area 1, J1 Range Northern, J1 Range Southern, J2 Range Eastern, J2 Range Northern, and J3 Range treatment systems

JBCC IAGWSP Tech Update Meeting Minutes for 10 December 2020Project and Fieldwork Update

Pew Road Treatment Plant is back up and running as of 12/1, following the repairs from the vandalism incident last month. The damage was not nearly as extensive as originally thought. The LTM crew is still working and will finish the well sampling as planned and on schedule. The wellheads for MW-467 and MW-489 will need to be raised for sampling and that will be coordinated with the contractor.

Dawson is continuing the 20-acre investigation at the Former E Range. The project is approximately fifty percent complete. Investigation of discrete targets/polygons/obstructions has been completed in 58 grids, and the team is currently working on discrete targets in grids E12 and F12. To date, thirty-six MEC items have been found. In addition, 52 20 mm target practice projectiles were found. The team will de-mob on 12/18/2020 and return on 3/2/2021. Intrusive work will continue until May 2021.

TetraTech is working on a proposal to request permission to test satellite imagery and remote sensory technology to see if it can detect subsurface metallic objects and MEC. IAGWSP has no issue with the testing as long as it does not interfere with the program work, however, the official proposal would need to be reviewed. In addition, it would need installation approval for security reasons. IAGWSP sees potential value in the testing that could be applicable and useful for other sites, although likely not at JBCC.

In the Central Impact Area, there are four dig teams working. Survey Units 8 and 9 are underway and ~38-34% complete, respectively. They are expected to be complete by the end of next week. The crew is scheduled to de-mob on 12/18/2020. USACE has asked them to return right after the holidays to finish the remaining 2600 digs. Parson has not yet agreed to return earlier than previously scheduled (in March).

The list of Demo Ops items remaining (previously provided) does not include items in the IRA plan and the staging area since Parsons is still evaluating whether those can be included safely and within contract parameters. The list will be amended once those issues are resolved and it is determined which items can be included and destroyed.

IAGWSP has informed Parsons that they would like to destroy the 44 rocket mortars and 40 warheads during demo operations in December and understand that a contract modification might be required for the items stored in the CDC magazine. Demo Ops is scheduled for 12/14-12/16.

MassDEP advised that the BIP notifications be held UNTIL there is official agency approval on the IRA Plan. IAGWSP will need to notify the town managers and Boards of Health agents.

USACE reported that while it was the intention to have all items destroyed before the Parsons' de-mob and before the new contractor starts, Parsons is pushing back on that and the issue has been elevated to Huntsville for resolution. The situation is further complicated because the two separate contractors will need to be separated and dig teams have to be positioned at least 200 feet apart at all times.

IAGWSP also reported that after review of the videos of recent BEM shots, it was clear that some extra sand/soil were expelled from the sides of the BEM and this is unusual. USACE

determined that, unlike previous detonations, which used 30lbs of net weight explosive, this time Parsons used 40lbs. USACE issued a "6048" form, which identifies a major issue and seeks further clarification. Parsons explained that the SUXOS was following the requirements in the ESS and other crew members were not aware of the difference and therefore did not correct the SUXOS. USACE noted that the 30lb weight was outlined in the QAPP and during the contract kick off meeting so there should not have been any misunderstanding. USACE issued a formal notice of "contract deficiency" and is seeking "corrective action" and "root cause analysis."

IAGWSP recommends that the scheduled detonations continue as planned and afterwards, the BEM liner be fully exposed and examined to identify if repairs/replacement is needed, which would be Parsons' responsibility. IAGWSP has also requested a reconnaissance of the area and has asked that all sand/soil be recontained/raked back under the liner for the winter.

Action Items

The action items were discussed and updated.

JBCC Cleanup Team Meeting

The next meeting of the JBCC Cleanup Team (JBCCCT) has not been scheduled. The previous meeting was conducted virtually on October 28, 2020, and the materials can be found on the IAGWSP web site at <https://bcc-iagwsp.org/iagwsp/community/impact/presentations/>. The Cleanup Team meeting discusses late breaking news and responses to action items, as well as updates from the IAGWSP and the Installation Restoration Program (IRP). The JBCCCT meetings provide a forum for community input regarding issues related to both the IRP and the IAGWSP.

3. SUMMARY OF DATA RECEIVED

Table 1 summarizes sampling for all media from 1 December to 31 December 2020. Table 2 summarizes the validated detections of explosives compounds and perchlorate for all groundwater results received from 1 December to 31 December 2020. These results are compared to the Maximum Contaminant Levels/Health Advisory (MCL/HA) values for respective analytes. Explosives and perchlorate are the primary contaminants of concern (COC) at Camp Edwards. Table 3 summarizes sampling of influent and groundwater samples for per- and polyfluoroalkyl substances (PFAS) from 1 June 2019 to present.

The twelve OUs under investigation and cleanup at Camp Edwards are the Central Impact Area, Demolition Area 1, Demolition Area 2, Former A Range, J-1 Range, J-2 Range, J-3 Range, L Range, Northwest Corner, Small Arms Ranges, Training Area, and Western Boundary. Environmental monitoring reports for each OU are generated each year to evaluate the current year groundwater results. These reports are available on the site Environmental Data Management System (EDMS) and at the project document repositories (IAGWSP office and Jonathan Bourne Library).

4. SUBMITTED DELIVERABLES

Deliverables submitted during the reporting period include the following:

- Monthly Progress Report No. 284 for November 2020 09 December 2020

5. SCHEDULED ACTIONS

The following documents were being prepared or revised in January 2021.

- CIA and J-2 Range IRA Plan for BEM rocket disposal
- Demolition Area 1 final 2020 Annual Environmental Monitoring Report
- Response to Comments Letter (RCL) for the CIA draft 2020 Annual Environmental Monitoring Report
- J-2 draft Annual Environmental Monitoring Report
- J-3 draft Annual Environmental Monitoring Report
- RCL for the draft Northwest Corner Demonstration of Compliance Report
- Small Arms Ranges Completion of Work Report

TABLE 1
Sampling Progress: 1 through 31 December 2020

Notes:

ng/L = nanograms per liter; ug/kg = micrograms per kilogram; U = not detected; J = estimated; UJ = estimated non detect

The LOQ value will be used to report non-detects when blank contamination occurs

Bolded results indicate detections of PFAS

Bolded and highlighted results indicate detection of PFAS above the EPA Lifetime Health Advisory: PFOS + PFOA > 70 ng/L.

Bolded and highlighted results indicate detection of PFAS6 above the MassDEP MCL: PFOS + PFOA + PFDA + PFHpA + PFHxS + PFNA > 20 ng/L

† Lifetime Health Advisory, US Environmental Protection Agency, May 2016

‡ PFAS Maximum Contaminant Level (MCL) Final Amendments ("MCL", 310 CMR 22.00 PFAS MCL Amendments), Massachusetts Department of Environmental Protection, October 2, 2020

§ PFAS compounds used in the summation of all analytes are listed in the above table
