

**MONTHLY PROGRESS REPORT #282  
FOR SEPTEMBER 2020**

**EPA REGION I ADMINISTRATIVE ORDERS SDWA 1-97-1019 and 1-2000-0014**

**JOINT BASE CAPE COD (JBCC)  
TRAINING RANGE AND IMPACT AREA**

The following summary of progress is for the period from 1 September to 30 September 2020.

**1. SUMMARY OF REMEDIATION ACTIONS**

**Remediation Actions (RA) Underway at Camp Edwards as of 25 September 2020:**

**Demolition Area 1 Comprehensive Groundwater RA**

The Demolition Area 1 Comprehensive Groundwater RA consists of the removal and treatment of contaminated groundwater to control further migration of explosives compounds and perchlorate. Extraction, treatment, and recharge (ETR) systems at Frank Perkins Road, Pew Road, Base Boundary, and the Leading Edge include extraction wells, ex-situ treatment processes to remove explosives compounds and perchlorate from the groundwater, and injection wells to return treated water to the aquifer.

The Frank Perkins Road Treatment Facility has been optimized as part of the Environmental and System Performance Monitoring (ESPM) program at Demolition Area 1. The treatment facility continues to operate at a flow rate of 175 gpm, with over 2.767 billion gallons of water treated and re-injected as of 25 September 2020. The following Frank Perkins Road Treatment Facility shutdowns occurred in September.

- 1950 on 02 September 2020 Extraction well EW-658 shut down due to a “VFD fault” alarm caused by a power supply interruption, and was restarted at 0755 on 03 September 2020.
- 0014 on 21 September 2020 Extraction well EW-658 shut down due to a VFD fault alarm caused by a power supply interruption, and was restarted at 0727 on 21 September 2020.

The Pew Road Mobile Treatment Unit (MTU) continues to operate at a flow rate of 65 GPM. As of 25 September 2020, over 659.0 million gallons of water was treated and re-injected. No Pew Road MTU shutdowns occurred in September.

The Base Boundary MTU continues to operate at a flow rate of 65 gpm. As of 25 September 2020, over 276.3 million gallons of water was treated and re-injected. No Base Boundary MTU shutdowns occurred in September.

The Leading Edge system continues to operate at a flow rate of 100 gpm. As of 25 September 2020, over 216.3 million gallons of water was treated and re-injected. No Leading Edge system shutdowns occurred in September.

## J-2 Range Groundwater RA

### Northern Plant

The J-2 Range Northern Treatment facility consists of removal and treatment of contaminated groundwater to control further migration of explosives compounds and perchlorate. The Extraction, Treatment, and Re-infiltration system includes three extraction wells, ex-situ treatment process to remove explosives compounds and perchlorate from the groundwater, and an infiltration basin to return treated water to the aquifer.

The Northern Treatment Building G continues to operate at a flow rate of 225 gpm. As of 25 September 2020, over 1.286 billion gallons of water have been treated and re-injected. No Northern Treatment Building G shutdowns occurred in September.

The Northern MTUs E and F continue to operate at a flow rate of 250 gpm. As of 25 September 2020, over 1.742 billion gallons of water have been treated and re-injected. The following J-2 Range Northern MTU shutdowns occurred in late August:

- MTU E shut down at 0445 on 30 August 2020 due to a System Inlet Low Flow alarm and was restarted at 0752 on 31 August 2020
- MTU F shut down at 2240 on 29 August 2020 due to a System Inlet Low Flow alarm and was restarted at 0748 on 31 August 2020.

### Eastern Plant

The J-2 Range Eastern Treatment facility consists of removal and treatment of groundwater to minimize downgradient migration of explosives compounds and perchlorate. The ETI system includes the following components: three extraction wells in an axial array, an ex-situ treatment process consisting of an ion exchange (IX) resin and granular activated carbon (GAC) media to treat perchlorate and explosives compounds, and three infiltration trenches located along the lateral boundaries of the plume where treated water will enter the vadose zone and infiltrate into the aquifer. The J-2 Range Eastern system is running at a combined total flow rate of 495 gpm.

The MTUs H and I continue to operate at a flow rate of 250 gpm. As of 25 September 2020, over 1.397 billion gallons of water have been treated and re-injected. No MTU H and I shutdowns occurred in September.

MTU J continues to operate at a flow rate of 120 gpm. As of 25 September 2020, over 644.5 million gallons of water have been treated and re-injected. The following MTU J shutdowns occurred in September:

- MTU Unit J shut down at 2302 on 31 August 2020 due to a VFD fault alarm, and was restarted at 0736 on 01 September 2020.

MTU K continues to operate at a flow rate of 125 gpm. As of 25 September 2020, over 764.2 million gallons of water have been treated and re-injected. No MTU K shutdowns occurred in September.

### J-3 Range Groundwater RA

The J-3 Range Groundwater RA consists of removal and treatment of contaminated groundwater to control further migration of explosives compounds and perchlorate. The ETR system includes four extraction wells, ex-situ treatment process to remove explosives compounds and perchlorate from the groundwater, and use of the existing Fuel Spill-12 (FS-12) infiltration gallery to return treated water to the aquifer.

The J-3 system is currently operating at 255 gpm. As of 25 September 2020, over 1.401 billion gallons of water have been treated and re-injected. The following J-3 Range system shutdowns occurred in September:

- FS-12 shutdown at 2333 on 31 August 2020 and was restarted at 0840 on 01 September 2020.

### J-1 Range Groundwater RA

#### Southern Plant

The J-1 Range Southern Groundwater RA consists of removal and treatment of contaminated groundwater to control further migration of explosives compounds. The ETR system includes two extraction wells, ex-situ treatment process to remove explosives compounds from the groundwater, and an infiltration trench to return treated water to the aquifer.

The Southern MTU continues to operate at a flow rate of 125 gpm. As of 25 September 2020, over 622.3 million gallons of water have been treated and re-injected. No J-1 Range Southern system shutdowns occurred in September.

#### Northern Plant

The J-1 Range Northern Groundwater RA consists of removal and treatment of contaminated groundwater to control further migration of explosives compounds and perchlorate. The ETR system includes two extraction wells, ex-situ treatment process to remove explosives compounds and perchlorate from the groundwater, and an infiltration trench to return treated water to the aquifer.

The Northern MTU continues to operate at a total system flow rate of 250 gpm. As of 25 September 2020, over 882.5 million gallons of water have been treated and re-injected. No J-1 Range Northern MTU shutdowns occurred in September.

### Central Impact Area RA

The Central Impact Area (CIA) Groundwater treatment facility consists of removal and treatment of groundwater to minimize downgradient migration of explosives compounds and perchlorate. The ETR system includes the following components: three extraction wells, an ex-situ treatment process consisting of an ion exchange (IX) resin and granular activated carbon (GAC) media to treat explosives compounds, and three infiltration galleries to return treated water to the aquifer. The CIA systems 1, 2, and 3 continue to run at a combined total flow rate of 750 gpm. As of 25 September 2020, over 2.209 billion gallons of water have been treated and re-injected. No CIA system shutdowns occurred in.

## 2. SUMMARY OF ACTIONS TAKEN

### Operable Unit (OU) Activity as of 30 September 2020

#### CIA

- Completed 100% of grids SU 6A and 6B grids
- Performed intrusive investigations
- Performed MM cued data collection
- Routine inspections of BEM cover to ensure cover is secure and intact
- Routine MD Processing
- System 1 bag filters were exchanged on 09 September 2020

#### Demolition Area 1

- Frank Perkins Treatment Facility bag filters were exchanged on 15 September

#### Demolition Area 2

- No activity

#### J-1 Range

- J1 Range South bag filters were exchanged on 10 September 2020

#### J-2 Range

- Groundwater sampling and hydraulic monitoring within the J2 East SPM program
- Groundwater sampling within the J2 North SPM program

#### J-3 Range

- No activity

#### L Range

- No activity

#### Small Arms Ranges

- No activity

#### Training Areas

- Intrusive investigation in Former E Range geophysical investigation grids

#### Other

- Collected process water samples from the Central Impact Area (Systems 1 ,2, and 3), Demolition Area 1, J1 Range Northern, J1 Range Southern, J2 Range Eastern, J2 Range Northern, and J3 Range treatment systems

**JBCC IAGWSP Tech Update Meeting Minutes 10 September 2020****Project and Fieldwork Update**

All treatment systems are up and running. There have been no issues since the last tech update meeting. Long-term monitoring sampling crews are continuing to perform annual sampling in J-2 Range North, including PFAS sampling. After they finish in J-2 North, then they will move to the J-2 East Range. EPA said they noted in the bi-weekly update that one of the new CIA wells had a hit of RDX and asked which location it was. It was explained that it was the northernmost of the water table wells and was installed downgradient of the 2000-meter berm area, which was location CIA-4 in the project note. MassDEP asked about recently received PFAS results and asked when and how the data would be reported. The group was reminded that it had been previously agreed that the PFAS sampling results would be included as part of the annual monitoring reports for each site. In the meantime, IAGWSP agreed to provide a one-page synopsis of PFAS sampling results with a map showing sampling locations and hits.

Dawson is continuing the 20-acre investigation at the Former E Range. Investigation of discrete targets has been completed in 18 grids, discrete grids/polygons/obstructions have been completed in nine grids and eight grids are in progress. To date, ten MEC items have been found: seven 3.5" rockets, two 20mm projectiles and one 60mm fuze. Work will continue at the Former E Range until February.

In the Central Impact Area, there are two Metal Mapper and two UXO teams working. They have completed advanced geophysical classification surveys on 6A, 6B, 7A and 7B. They are finishing with re-shots in 7B. Survey Unit 9 is underway and is 33% complete. The dig teams have finished in grids 6A and 6B, grid 7A is underway and is approximately 7% complete. The dig list for 7B is in development. The 100% grid in 6B is complete and the one in 6A will be completed this week. EPA and MassDEP noted that they planned to discuss the next 100% grid choices and would provide feedback shortly.

**Action Items**

The action items were discussed and updated.

**JBCC CT Meeting Planning**

An update was provided on the planning for a JBCC CT meeting. Discussions for the options for a virtual meeting have been ongoing and AFCEC will work with their contractor to set up an account with a platform that will be accessible to the public and DoD users. AFCEC noted that they are preparing to present three agenda items: updates on PFOS/PFOA/1,4-dioxane and the Military Munitions Response Program and 6-Month Look-Ahead. IAGWSP will present a general program update of ongoing activities and a 6-Month Look-Ahead. IAGWSP will send a draft agenda to the group for review.

**JBCC IAGWSP Tech Update Meeting Minutes 24 September 2020**Project and Fieldwork Update

All treatment systems are up and running. The Frank Perkins Road treatment system went down briefly Sunday evening but it was brought back online first thing Monday morning. Long-term monitoring sampling crews are continuing to perform annual sampling in J-2 Range North, including PFAS sampling. After they finish in J-2 North, then they will move to the J-2 East Range. IAGWSP is completing a synopsis of PFAS sampling results with a map showing sampling locations and hits and will distribute it to the group soon.

Dawson is continuing the 20-acre investigation at the Former E Range. Investigation of discrete targets/polygons/obstructions has been completed in 24 grids, nine grids are in progress and the team is currently working on discrete targets in grids D6 and E6. To date, eleven MEC items have been found: eight 3.5" rockets, two 4.2" illumination mortars, and one 60mm fuze. Work will continue at the Former E Range until March.

In the Central Impact Area, there are two MetalMapper and two UXO teams working. They expect to be done next week with Metal Mapping and will perform re-shoots as needed. The dig teams have finished in grids 6A and 6B, and are working in grids 7A and 7B. Each are approximately 25% complete.

Central Impact Area 100% Verification Grid Presentation

A presentation was provided on the results of the CIA Phase 3 Area 3 100% dig validation. A figure showing the validation grids (21\_56 and 27\_61) was displayed and discussed. The group was reminded of the goals set in the Decision Document (remove 75-95% of UXO while maximizing removal of net explosive weight) as well as the goals of the classification (to correctly classify 95% of the targets of interest (TOI) while reducing clutter digs by greater than 70%).

A figure showing the Metal Mapper data was displayed along with the results for grid 21\_56. There were 126 EM61 anomaly locations with MetalMapper cued data collection. Of those, 46 met the dig criteria resulting in a recommended dig rate of 36.5%. The remaining 88 anomalies were dug for QA. Fourteen TOI (UXO or UXO-like items) were recovered. For the classification results, 88 clutter items were correctly classified, 26.7% of the clutter was incorrectly classified as "likely- TOI" therefore meeting the goal of reduction of clutter digs by 70%.

A figure showing the Metal Mapper data was displayed along with the results for grid 27\_61. There were 198 EM61 anomaly locations with MetalMapper cued data collection. Of those, 39 met the dig criteria resulting in a recommended dig rate of 19.6%. The remaining 160 anomalies were dug for QA. Seventeen TOI (UXO or UXO-like items) were recovered. For the classification results, 157 clutter items were correctly classified, 14.4% of the clutter was incorrectly classified as "likely- TOI" therefore meeting the goal of reduction of clutter digs by 70%.

To date the Phase 3 Area 3 results are passing the Decision Document criteria (75-95%) and are close to the detection goal of 95%.

The current status and path forward was reviewed. In Phase III Area 3, MetalMapper data collection and classification is complete for survey units 6 and 7. The data target lists have been

approved by USACE and all QC/QA seeds were within 1m of a dig location. MetalMapper data collection is complete in survey unit 9 except for reshots and collection is ongoing in survey unit 8. Digs have been completed in survey unit 6 and results have been approved by USACE. All validation grids have been selected. Excavation of grid 38\_35 in survey unit 8 will be closer to the end of the year. It was noted that with late start and need to work around delayed firing schedule, Phase 3 Area 3 excavation will likely continue into December. A status map showing work conducted as of September 18, 2020 was displayed.

### Action Items

The action items were discussed and updated.

### **JBCC Cleanup Team Meeting**

The next meeting of the JBCC Cleanup Team (JBCCCT) has been tentatively scheduled for October 28, 2020. The meeting will be held virtually and information on how to participate will be published soon. Meeting materials from previous meetings can be found on the IAGWSP web site at <https://jbcc-iagwsp.org/iagwsp/community/impact/presentations/>. The Cleanup Team meeting discusses late breaking news and responses to action items, as well as updates from the IAGWSP and the Installation Restoration Program (IRP). The JBCCCT meetings provide a forum for community input regarding issues related to both the IRP and the IAGWSP.

### **3. SUMMARY OF DATA RECEIVED**

Table 1 summarizes sampling for all media from 1 September to 30 September 2020. Table 2 summarizes the validated detections of explosives compounds and perchlorate for all groundwater results received from 1 September to 30 September 2020. These results are compared to the Maximum Contaminant Levels/Health Advisory (MCL/HA) values for respective analytes. Explosives and perchlorate are the primary contaminants of concern (COC) at Camp Edwards. Table 3 summarizes sampling of influent and groundwater samples for per- and polyfluoroalkyl substances (PFAS) from 1 June 2019 to present.

The twelve OUs under investigation and cleanup at Camp Edwards are the Central Impact Area, Demolition Area 1, Demolition Area 2, Former A Range, J-1 Range, J-2 Range, J-3 Range, L Range, Northwest Corner, Small Arms Ranges, Training Area, and Western Boundary. Environmental monitoring reports for each OU are generated each year to evaluate the current year groundwater results. These reports are available on the site Environmental Data Management System (EDMS) and at the project document repositories (IAGWSP office and Jonathan Bourne Library).

### **4. SUBMITTED DELIVERABLES**

Deliverables submitted during the reporting period include the following:

- |  |                   |
|--|-------------------|
| • Monthly Progress Report No. 281 for August 2020                | 09 September 2020 |
| • L Range 2020 Annual Environmental Monitoring Report            | 14 September 2020 |
| • J-1 North and J-1 South Ranges Environmental Monitoring Report | 30 September 2020 |

## 5. SCHEDULED ACTIONS

The documents below were being prepared or revised in September 2020.

- CIA and J-2 Range IRA Plan for BEM rocket disposal
- J-1 Ranges 2019 Annual Environmental Monitoring Report
- L Range 2020 Annual Environmental Monitoring Report
- 2019 Source Report
- Land Use Controls Monitoring Report
- Northwest Corner Demonstration of Compliance Report
- Small Arms Ranges Completion of Work Report

## PFAS Summary Report – Groundwater Joint Base Cape Cod, IAGWSP

### Notes:

ng/L = nanograms per liter; ug/kg = micrograms per kilogram; U = not detected; J = estimated; UJ = estimated non detect

The LOQ value will be used to report non-detects when blank contamination occurs

### Bolded results indicate detections of PFAS

**Bolded and highlighted results indicate detection of PFAS above the EPA Lifetime Health Advisory: PFOS + PFOA > 70 ng/L.**

**Bolded and highlighted results indicate detection of PFAS above the MassDEP and the MassDEP Office of Research and Standards Guideline (ORSG): PFOS + PFOA + PFDA + PFHpA + PFHxS + PFNA > 20 ng/L**

† Lifetime Health Advisory, US Environmental Protection Agency, May 2016

‡ Final PFAS-Related Revisions to the Massachusetts Contingency Plan ("MCP", 310 CMR 40.0000), Massachusetts Department of Environmental Protection, December 27, 2019

‡ PFAS Maximum Contaminant Level (MCL) Proposed Amendment & Public Comment ("MCL", 310 CMR 22.00 PFAS MCL Amendments), Massachusetts Department of Environmental Protection, December 27, 2019

‡ Documentation for Updated Office of Research and Standards Guidelines (ORSG) for Per- and Polyfluoroalkyl Substances (PFAS) in Drinking Water, Massachusetts Department of Environmental Protection, January 27, 2020

§ Summation of results for all compounds appearing in the report:

- 6:2 Fluorotelomer sulfonate (6:2 FTS)
- 8:2 Fluorotelomer sulfonate (8:2 FTS)
- N-Ethyl perfluorooctanesulfonamidoacetic acid (NEtFOSAA)
- N-Methyl perfluorooctanesulfonamidoacetic acid (NMeFOSAA)
- Perfluoro-1-heptanesulfonate (PFHpS)
- Perfluorobutanesulfonic acid (PFBS)
- Perfluorobutanoic acid (PFBA)
- Perfluorodecane sulfonate
- Perfluorodecanoic acid (PFDA)
- Perfluorododecanoic acid (PFDoA)
- Perfluoroheptanoic acid (PFHpA)
- Perfluorohexanesulfonic acid (PFHxS)
- Perfluorohexanoic acid (PFHxA)
- Perfluorononanoic acid (PFNA)
- Perfluorooctanesulfonamide (FOSA)
- Perfluorooctanesulfonic acid (PFOS)
- Perfluorooctanoic acid (PFOA)
- Perfluoropentanoic acid (PFPA)
- Perfluorotetradecanoic acid (PFTA)
- Perfluorotridecanoic acid (PFTrDA)
- Perfluoroundecanoic acid (PFUnA)
